TIRED OF WAITING ON AMMO?

Golden Saber Bonded is the ultimate extension of Remington's revolutionary Golden Saber HPJ bullet concept. Through an exclusive Remington process, the lead core is hot-bonded to the brass jacket. The result is exceptional weight retention - up to 97% when fired through automobile glass while maintaining phenomenal terminal performance when shot through heavy clothing or into bare gelatin. And the bonding process does not cause a reduction in accuracy or performance - jacket and core concentricity and resulting gyroscopic balance have been maintained to consistently deliver match-grade accuracy.

ONE OF THE WORLD'S MOST POPULAR MILITARY AND LAW ENFORCEMENT CARBINE MODELS, THE BUSHMASTER M4 FEATURES THE DISTINCTIVE M4 BARREL PROFILE AND A SIX-POSITION TELESTOCK FOR EASE OF DEPLOYMENT. THE BUSHMASTER A3 PATROLMAN'S CARBINE IS MODELED AFTER THEIR U.S. MILITARY AND LAW-ENFORCEMENT UTILIZED M4 CARBINES, BUT WITH ADDITIONAL BARREL LENGTH TO MAKE THEM LEGAL FOR SALE TO INDIVIDUALS. THE TELESTOCK, PISTOL GRIP AND TWO PIECE HANDGUARDS ARE ALL MOLDED OF STRONG BLACK THERMOSET COMPOSITE MATERIAL AND THE HANDGUARDS ARE INTERNALLY SHIELDED AGAINST BARREL HEAT BUILD-UP. WE CARRY THE FULL LINE OF ALS AMTEC LESS-LETHAL SYSTEMS

Escalation of force is a key consideration in the legitimacy of a self-defense shooting. Knowledgeable courts and review boards recognize the initial deployment of less lethal rounds as key evidence of intent to prevent lethal injury. Ideally a defender should be capable of sufficiently incapacitating a subject to allow the subject to be controlled while follow up actions are considered.

AMTEC LESS-LETHAL SYSTEMS

TIRED OF WAITING ON AMMO?

Golden Saber Bonded is the ultimate extension of Remington's revolutionary Golden Saber HPJ bullet concept. Through an exclusive Remington process, the lead core is hot-bonded to the brass jacket. The result is exceptional weight retention - up to 97% when fired through automobile glass while maintaining phenomenal terminal performance when shot through heavy clothing or into bare gelatin. And the bonding process does not cause a reduction in accuracy or performance - jacket and core concentricity and resulting gyroscopic balance have been maintained to consistently deliver match-grade accuracy.
